Up/Down Market Capture

Measure of a product's performance in up/down market quarters relative to an appropriate market benchmark over a given period. The product's return during up/down market quarters is then divided by the relevant benchmark return for the same period. The higher the ratio the better the product performed relative to the benchmark in up markets. The lower the ratio the better the product protected capital during market declines. Note: The statistic may be less significant if the number of up/down quarters is low or if the benchmark is not relevant to the manager's style.
